

## BuildTool - ANT

Create a java project -> Create a package antdemo -> create a java class AntDemo.java

Add below code

```
package antDemo;  
public class AntDemo1 {  
    public static void main(String[] args) {  
        // TODO Auto-generated method stub  
  
        System.out.println("Executing Demo Ant");  
    }  
}
```

Build the above code using ANT tool

Right click on project and create a new XML file with name as build.xml

Right click on project and create a folder with name as staging.

Add the below content in build.xml file

```
<?xml version="1.0" encoding="UTF-8"?>  
<project default="run" name="antDemo">  
    <target name="run" depends="compile"></target>  
    <java classname="antDemo.Demo1">  
        <classpath path="staging"></classpath>  
    </java>  
    <target name="compile">  
        <javac includeantruntime="false" srcdir="./src" destdir="staging"></javac>  
    </target>  
</project>
```
